#Science Behind CPR

- Full form of CPR & BLS
- Concept of heart attack (highlight importance of AED)
- Elaborate on brain death in the absence of oxygen and the time window.
- Recognition of cardiac arrest (without the need to check pulse)
- Steps in initial assessment

Note:

- More emphasis is given for Adult CPR (One rescuer only)
- During feedback, explain about various courses of BLS (HCP & Layperson) conducted by us. Get contact details if they are interested in further courses.

NAGPUR: A staff nurse at the NKP Salve Institute of Medical Sciences and Lata Mangeshkar Hospital saved the life of an accident victim by giving him Cardiac Pulmonary Resuscitation (CPR). She had undertaken a training in basic life support (BLS) and CPR in the college but somehow had never got to use it on a patient.

"The year 2015 is being observed as the 'Emergency Services' year by our college. We have trained over 1500 employees, both medico and non-medicos. It is a matter of pride that one of our nurse could use this training on a patient and save his life and take him to the nearest hospital," college professor Subha Gade told TOI.

The staff nurse Kalpana Fulzele who gave the CPR to the accident victim for about 30 minutes before an ambulance reached there said, "I am happy that I could use the CPR training. But I also took help of persons passing by. I had got tired so I showed it to a young boy and offered to try it. Luckily one after other we tried to revive the patient and he could get back to self-breathing. Then we reached him to the nearest hospital."

Fulzele was going for her morning shift duty when she saw the crowd around the victim. "I was already late for the duty. But when I called up the matron, she told me to first help the patient. Then I provided CPR to the 40 year old patient who was hit by some unknown vehicle," she said.

Megacode Testing Checklist: Scenarios 1/3/8

Bradycardia → Pulseless VT → PEA → PCAC

StudentName _____ Date of Test _____

Critical Performance Steps	✓ if done correctly
Team Leader	
Ensures high-quality CPR at all times	
Assigns team member roles	
Ensures that team members perform well	
Bradycardia Management	
Starts oxygen if needed, places monitor, starts IV	
Places monitor leads in proper position	
Recognizes symptomatic bradycardia	
Administers correct dose of atropine	
Prepares for second-line treatment	
Pulseless VT Management	
Recognizes pVT	
Clears before analyze and shock	
Immediately resumes CPR after shocks	
Appropriate airway management	
Appropriate cycles of drug–rhythm check/shock–CPR	
Administers appropriate drug(s) and doses	
PEA Management	
Recognizes PEA	
Verbalizes potential reversible causes of PEA (H's and T's)	
Administers appropriate drug(s) and doses	
Immediately resumes CPR after rhythm checks	
Post–Cardiac Arrest Care	
Identifies ROSC	
Ensures BP and 12-lead ECG are performed, O ₂ saturation is monitored, verbalizes need for endotracheal intubation and waveform capnography, and orders laboratory tests	
Considers targeted temperature management	

STOP TEST

TestResults	Check PASS or NR to indicate pass or needs remediation:	PASS <input type="checkbox"/>	NR <input type="checkbox"/>

Megacode Testing Checklist: Scenarios 4/7/10

Tachycardia → VF → PEA → PCAC

StudentName _____ Date of Test _____

Critical Performance Steps	✓ if done correctly
Team Leader	
Ensures high-quality CPR at all times	
Assigns team member roles	
Ensures that team members perform well	
Tachycardia Management	
Starts oxygen if needed, places monitor, starts IV	
Places monitor leads in proper position	
Recognizes unstable tachycardia	
Recognizes symptoms due to tachycardia	
Performs immediate synchronized cardioversion	
VF Management	
Recognizes VF	
Clears before analyze and shock	
Immediately resumes CPR after shocks	
Appropriate airway management	
Appropriate cycles of drug–rhythm check/shock–CPR	
Administers appropriate drug(s) and doses	
PEA Management	
Recognizes PEA	
Verbalizes potential reversible causes of PEA (H's and T's)	
Administers appropriate drug(s) and doses

Adult CPR and AED Skills Testing Checklist

Student Name _____ Date of Test _____

Hospital Scenario: "You are working in a hospital or clinic, and you see a person who has suddenly collapsed in the hallway. You check that the scene is safe and then approach the patient. Demonstrate what you would do next."

Prehospital Scenario: "You arrive on the scene for a suspected cardiac arrest. No bystander CPR has been provided. You approach the scene and ensure that it is safe. Demonstrate what you would do next."

Once student shouts for help, instructor says, "Here's the barrier device. I am going to get the AED."

Cycle 1 of CPR (30:2) *CPR feedback devices preferred for accuracy

Rescuer 2 says, "Here is the AED. I'll take over compressions, and you use the AED."

STOP TEST

Instructor Notes

- Place a ✓ in the box next to each step the student completes successfully.
- If the student does not complete all steps successfully (as indicated by at least 1 blank checkbox), the student must receive remediation. Make a note here of which skills require remediation (refer to Instructor Manual for information about remediation).

Test Results Check PASS or NR to indicate pass or needs remediation:

PASS ☐ NR ☐

Instructor Initials _____ Instructor Number _____ Date _____

Adult CPR and AED

Skills Testing Critical Skills Descriptors

1. Assesses victim and activates emergency response system (this *must* precede starting compressions) within a maximum of 30 seconds. After determining that the scene is safe:
 - Checks for responsiveness by tapping and shouting
 - Shouts for help/directs someone to call for help *and* get AED/defibrillator
 - Checks for no breathing or no normal breathing (only gasping)
 - Scans from the head to the chest for a minimum of 5 seconds and no more than 10 seconds
 - Checks carotid pulse
 - Can be done simultaneously with check for breathing
 - Checks for a minimum of 5 seconds and no more than 10 seconds
2. Performs high-quality chest compressions (initiates compressions immediately after recognition of cardiac arrest)
 - Correct hand placement
 - Lower half of sternum
 - 2-handed (second hand on top of the first or grasping the wrist of the first hand)
 - Compression rate of 100 to 120/min
 - Delivers 30 compressions in 15 to 18 seconds
 - Compression depth and recoil—at least 2 inches (5 cm) and avoid compressing more than 2.4 inches (6 cm)
 - Use of a commercial feedback device or high-fidelity manikin is highly recommended
 - Complete chest recoil after each compression
 - Minimizes interruptions in compressions
 - Delivers 2 breaths so less than 10 seconds elapses between last compression of one cycle and first compression of next cycle
 - Compressions resumed immediately after shock/no shock indicated
3. Provides 2 breaths by using a barrier device
 - Opens airway adequately
 - Uses a head tilt–chin lift maneuver or jaw thrust
 - Delivers each breath over 1 second
 - Delivers breaths that produce visible chest rise
 - Avoids excessive ventilation
 - Resumes chest compressions in less than 10 seconds
4. Performs same steps for compressions and breaths for Cycle 2
5. AED use
 - Powers on AED
 - Turns AED on by pushing button or lifting lid as soon as it arrives
 - Correctly attaches pads
 - Places proper-sized (adult) pads for victim's age in correct location
 - Clears for analysis
 - Clears rescuers from victim for AED to analyze rhythm (pushes analyze button if required by device)
 - Communicates clearly to all other rescuers to stop touching victim
 - Clears to safely deliver shock
 - Communicates clearly to all other rescuers to stop touching victim
 - Delivers a shock
 - Resumes chest compressions immediately after shock delivery
 - Does *not* turn off AED during CPR
6. Resumes compressions
 - Ensures that high-quality chest compressions are resumed immediately after shock delivery
 - Performs same steps for compressions

Subject: Undergraduate Clinical Skills Training Programme - 2018

Respected Sir,

Kindly permit us to conduct clinical skills training workshops for the undergraduate students as per the schedule attached. This schedule has been made in consultation with the time table committee. All the Heads of the Departments are requested to permit the students to attend the workshops as per the schedule. Attendance of the students will be in the form of certificate of completion which will be issued to them after completion of the workshop.

The students will be asked to submit the certificate to the exam cell, NKPSIMS before they appear for their respective final exams.

Thanking you

Yours sincerely

Dr. Anjali Bhure
Chairperson

EMS committee, NKPSIMS

Developing and Validating Modules for Communication Skills for MBBS Students

¹Apoorva Pande, ²Dr. Anne Wilkinson

^{1,2}Associate professor, Department of Pathology

Correspondence Author: Apoorva Pande, Associate professor, Department of Pathology

Type of Publication: Original Research Paper

Conflicts of Interest: Nil

Abstract

Introduction: Communication with a patient is the basic art that a doctor has to inculcate. Certain etiquettes have to be followed and discernible speaking skills have to be achieved. Introducing specific programs at the undergraduate level will benefit the students and instill confidence in them for dealing with patients in future. It is frequently noted that students having good communication skills do not find it difficult to convey and impart their knowledge. Therefore this workshop was conducted step-wise so as to make the students acquainted with the needs of the medical profession. The communication skills to be developed include both verbal and non-verbal skills. Efforts were made through workshops to stress on the development of rapport building, active listening for the patient's perspective and responding to emotions.

Objectives: To develop and validate modules for communication skills at the three levels of the MBBS teaching program.

Methodology: The study was conducted in our institute after getting Institute Ethics Committee clearance. Workshop modules were developed for first, second and final MBBS students and circulated for validation to medical teachers and private practitioners. The workshops were conducted for the three levels based on these modules. Feedback was

also taken from the students and faculty at the end of each workshop, and improvisations were done for future workshops as needed.

Results: Students and faculty members' feedback forms were studied and graphical data was prepared according to the study. The students felt the need for conducting communication skills workshops at regular intervals throughout their MBBS career. Overall the workshops proved to be of a great help to the students.

Conclusion: Inculcating appropriate communication skills from an Under Graduate level may help the students to do well in their viva, as well as communicate effectively with patients.

Keywords: Communication, Speaking skills, Validate modules, Undergraduate level.

Introduction

Communication with a patient is the basic art that a doctor has to inculcate. Certain etiquettes have to be followed and discernible speaking skills have to be achieved. An early realization of the need for developing communication skills is extremely pivotal in achieving the same. Introducing specific programs at the undergraduate level will benefit the students and instill confidence in them for dealing with patients in future. Moreover, this program should be conducted step-wise so as to make the students acquainted with the needs of this profession.

Apart from the clinics, a major conundrum facing the medical students is the much-dreaded viva. Knowledge

regarding a particular subject might be helpful while giving a theory examination, but not necessarily so during a practical one. However, if a viva examination does not go well, it doesn't imply poor knowledge of the subject. It is frequently noted that students having fairly decent communication skills do not find it difficult to convey and impart their knowledge. It sets them apart from the students who don't possess similar skills; the operating difference being confidence levels. Therefore teaching of communication skills has to be integrated in the medical school curricula.⁸

In a culturally and economically diverse country like ours, communication skills aren't uniform either. It might be an arduous task for students coming from the states having low socio-economic status and literacy rate. Even before facing a patient, medical students need to be able to learn to communicate with their peers and teachers. The communication skills to be developed include both verbal and non-verbal skills. Undergraduate communication skill workshops will help students in overcoming the hurdles of this tricky yet crucial aspect of the occupation. Efforts have been made through various research programs to stress on the development of rapport building, active listening for patient's perspective and responding to emotions.^{2,3}

Objectives

To develop and validate modules for communication skills at three levels of the MBBS teaching program.

Methodology

The study was conducted in our institute after getting Institute Ethics committee Clearance.

Workshop modules were developed for first, second and final MBBS students and circulated for validation to medical teachers and private practitioners.

Students and facilitators feedback was also taken and same useful suggestions were incorporated into the method of conducting some of the sessions

Workshop Modules for Communication Skills For MBBS Students

Level I – Conducted for first MBBS students

Lecture on communication skills and barriers of effective communication.

The class was split into small groups of ten with one facilitator (teacher) each.

The following were done:

Introduction of each student

A game for ice breaking

Each member in the group spoke extempore for one minute on a given topic

Group activity

Feedback from the students and facilitator.

Level II – Conducted for second MBBS students

1. Speaking skills in viva were demonstrated by "Role Play" and lecture.
2. History taking – Lecture
3. Prescription writing – Lecture
4. Explaining prescription in the patient's language – Role play by students in small groups where each group is given a different scenario.
5. Feedback from students and facilitator.

Level III – Conducted for Final Year MBBS students

1. Etiquettes in communication – Lecture
2. Handling difficult clinical scenarios in OPD, wards, camps – Through role play by students in small groups.
3. Written communication – Maintaining case records and writing discharge summary– Demonstrated through a lecture

4. Oral communication – Making presentations for conferences and seminars (Powerpoint presentations, Posters) Demonstrated through a lecture.

5. Feedback from students and facilitator.

Result:

Graph 1: Communication workshop level I- 5 workshops conducted

1. Communication workshop level I- 5 workshops conducted

Graph 2: Communication skills workshop level II- 4 workshops conducted

Graph 3: Communication skills workshop level III- 2 workshops conducted

Graph 4: Usefulness of the three workshops

Graph 5: Duration of workshops

Graph 6: Faculty feedback

Discussion

It has been seen in the past few years that there has been a huge progress in the medical field. However a major deficiency was observed regarding the communication skills. Studies have proved that effective interviewing and communication skills can not only be learnt but also forgotten.^{4,5} Along with such an advancement in the clinical branch a need was felt on improving the communication skills of the professionals so that they get an easy way to interact with the patients and convey the information required in a better manner. Part of the doctor's task is to help the patient understand the information so that the patient may help himself.⁶ Good doctors communicate effectively with patients. They identify patients' problems more accurately, and patients are more satisfied by the care they receive.⁷ Doctors should look confident while delivering any kind of information. They need to be convincing enough for someone to believe in them.

Inculcating appropriate communication skills from a UG level may help the students to do well in their viva as well. Looking at the increasing competition these days, students need to be more confident regarding their

knowledge. Comparative studies have been made with the intention of analysing the difference in the communication skills of first year students who are amateur and final year students who have attended the curriculum.⁸ It was found that their communication skills improved remarkably by final year.

Research suggests that students have expressed a need for conducting communication skills workshops at regular intervals to make them aware of the problems they can face, be it an examination or dealing with a patient. Effective studies have been done where the communication.^{9, 10} Our students expressed their views on the workshops saying that the faculties at the workshop were able to clearly elaborate their sessions. Along with this they said that the contents of the sessions had a logical continuity with the previous sessions conducted for them. Moreover the undergraduates expressed their wish on emphasizing more from the exam point of view. Overall the workshop proved to be of a great help for the students and the faculties themselves agreed on the difference they saw in the students' performances after these workshops.

Conclusion

The three communication skills workshops for MBBS students at first, second and final year MBBS levels were very useful for the students. Such workshops are the need of the hour and should be introduced in the curriculum.
