Changes in medical student attendance post Covid

The professional courses as undergraduate medical education need high theoretical and clinical classes attendance as those students will be future doctors and will deal with the health and disease. Student absenteeism is a major concern for undergraduate medical education training in India especially after Covid as they probably started loving to learn in their comfort zone anytime anywhere by using various online learning resources. But they are forgetting that regular attendance is a fundamental component of professionalism, especially in the context of medical colleges. The Competency-based curriculum introduced by the National Medical Commission (NMC) prioritizes the development of necessary competence through mandatory clinical contact and skills. Despite the mandate imposed by medical universities, absenteeism remains a significant challenge in medical schools.

Several studies have been conducted to explore reasons for absenteeism, which showed lack of subject matter interest, poor teaching strategies, unfavourable learning environment and examination schedule, quality of teaching materials, assessment methods, lifestyle-related pressures and poor relations with faculty. In addition, the lecture contents have become more accessible in the form of slides, videos, audios over the internet for self-learning purpose, which may contribute to the absenteeism.

Many studies have shown that there is a significant positive association between attendance and the performance of students in both theory and practical aspects. Only gaining knowledge through the available material is not enough to learn medicine as it is the experience of teacher which he shares during the regular classes or demonstrates the techniques of examination and actually teaches by holding hands is the actual learning.

Students may get marks in exams but they will not be good clinicians as there is no classroom or bedside teaching they have experienced. It is high time to focus on students' attendance otherwise the medical education will deteriorate!

Jewels of NKP

Dr Neena Nagdeo, Prof and Head Dept. of Microbiology received Dr Pratibha Narang Professional achievement Oration award at VAMMCON held at DMMC Nagpur on 30th and 31st of March 2024
